

## Welcome to the Preventive Medicine Center!

- + This is the summary of your answers to the Health Checker, registered on November 13 in 2023.

The results of the Health Checker are based on your answers. This report is not a medical diagnosis, nor is intended to replace clinical assessment performed by a health professional.

### Biometric data and other information

Male

18-29

Weight

100Kg

Height

1,80m

BMI

30,8

(Body Mass Index)

BODY FAT CONCENTRATION

-

SMOKING LOAD

-

(Pack units per year)

YEARS W/O SMOKING

-

- + At this age, you should periodically carry out the screenings for preventive surveillance intended for young people (for example, sexually transmitted diseases) and watch out for excesses (example: binge drinking).
- + Your BMI (Body Mass Index) value indicates that you are above normal body weight, meaning obesity - class I (30 a 34.9 kg/m2). However, please note that this index does not distinguish lean mass, fat mass, bone density and fluids, nor their distribution. The interpretation of the BMI should be associated with other indicators such as: waist circumference, and any particular health condition, or other physiological state

### Health problems

- + You replied that you have some health problems/concerns, so you should be followed up by your doctor and/or health team.

Weight changes

High blood pressure (hypertension)

### Family history of disease

- + Genetic predisposition can cause or aggravate certain diseases. Sharing your family history of illness with your healthcare team enables an early diagnosis and the adoption of a personalized care plan, minimizing risks.
- Cardiaca | AVC
- + If someone in your immediate family has cardiovascular disease, you should assess your individual risk with your doctor.

### Cardiovascular risk factors

High BMI

High blood pressure

Family history

- + Cardiovascular diseases are one of the major causes of mortality and poor quality of life.
- + The main risk factors are: high blood pressure, high cholesterol, diabetes, overweight, large waist circumference, smoking and a family history of disease. Keep a proactive surveillance of these risk factors.
- + When 1 risk factor exists, cardiovascular risk is already considered to exist.

### Health habits and lifestyle

- + A healthy lifestyle is essential to have quality of life, today and in the future, which implies having a healthy and balanced diet, avoiding sedentary behavior and practicing physical exercise, controlling the levels of stress, maintaining good sleep routines, avoiding alcohol consumption and not smoking.
- + Your daily choices make a difference.
- + Your answers indicate that you have an adequate lifestyle, with aspects that you can improve.
