

Welcome to the Preventive Medicine and Longevity Center

- + This is the summary of your answers to the Health Checker, registered on november 20 in 2023.

The results of the Health Checker are based on your answers. This report is not a medical diagnosis, nor is intended to replace clinical assessment performed by a health professional.

Biometric data and other information

Male 18-29 52 Kg 1,68m

BMI 18,4 (Body Mass Index)

BODY FAT CONCENTRATION

SMOKING LOAD - (Pack units per year)

YEARS W/O SMOKING -

- + At this age, you should periodically carry out the screenings for preventive surveillance intended for young people (for example, sexually transmitted diseases) and watch out for excesses (example: binge drinking).

- + Your BMI (Body Mass Index) value indicates that you are below normal body weight (less than or equal to 18.5 kg/m²). However, please note that this index does not distinguish lean mass, fat mass, bone density and fluids, nor their distribution. The interpretation of the BMI should be associated with other indicators such as: waist circumference, and any particular health condition, or other physiological state.

- + According to the image you have chosen, you identified yourself with thinness. If you are concerned that you are underweight, you should consult your doctor. The risk of cardiovascular and metabolic diseases increases when the waist circumference is greater than 80 cm in women and 94 cm in men.

Health conditions

- + You replied that you have some health problems/concerns, so you should be followed up by your doctor and/or health team.

Fatigue

Difficulty in concentration and/or memory

Headache

Back pain and/or low back pain

Other conditions

Family history of disease

- + Genetic predisposition can cause or aggravate certain diseases. Sharing your family history of illness with your healthcare team enables an early diagnosis and the adoption of a personalized care plan, minimizing risks.

- None of the presented options

- + You replied that you have no family history of cancer, neurological and cardiovascular disease.

Cardiovascular risk factors

- + The existence of cardiovascular risk factors was not indicated.
- + Cardiovascular diseases are one of the major causes of mortality and poor quality of life.
- + The main risk factors are: high blood pressure, high cholesterol, diabetes, overweight, large waist circumference, smoking and a family history of disease. Keep a proactive surveillance of these risk factors.

Health habits and lifestyle

- + A healthy lifestyle is essential to have quality of life, today and in the future, which implies having a healthy and balanced diet, avoiding sedentary behavior and practicing physical exercise, controlling the levels of stress, maintaining good sleep routines, avoiding alcohol consumption and not smoking.

- + Your daily choices make a difference.

- + Your answers indicate that you have an adequate lifestyle, with aspects that you can improve.

What would you like to improve in your health?

- + Practice and/or increase physical exercise | Strengthen muscle mass
- + Have a healthier diet that suits my needs
- + Reduce anxiety and stress | Preventing burnout"
